

## **IRIS Touch NG Firmware Enhancements and Additions from Version 2.15 to Version 2.16**

### **Overview**

This document details changes to the IRIS Touch NG range from firmware Version 2.15 to Version 2.16.

This release does not change any functionality as far as users are concerned. It was made as the internal manufacturing test function has been modified to speed up production testing.

This release note is for information only as diallers will shortly be shipped with this new software version. Users and installers need take no action.
